

server /- start server /fB./server portNum/fP /fBserver/fP starts a server process that connects to a given port and waits for messages to be sent from client processes. Trans commands are sent from the clients and the server process processes them accordingly. The sever process can take messages from multiple clients and after 30 seconds of inactivity the server ends. The server may sometimes remain longer than 30 seconds, but according to the select() man page the timeout is only a rough lower bound echu
