

client /- start client /fB./client portNum ipAddr/fP /fBclient/fP starts a client process that connects to a given port and ip address that interacts with a server process through sockets. Trans and Sleep commands can be given by entering a series of /fBTn/fP and /fBSn/fP commands respectively, where n is a integer. Upon reading a eof the process terminates and a log file is produced. select(2), recv(2), socket(2), bind(2), connect(2) echiu
